

CSCE 242 Project

Title: My Closet

Description: My Closet is a wardrobe management web app that will allow users to digitally organize their clothes, create outfits, and tag them for different occasions or “vibes”. It could be work, a casual day, a party, gameday, a nice dinner, etc. Users can upload photos of their clothing items and categorize them as clothing type (top, pants, shoes, etc.) and create outfits by bringing different pieces together. This will make it easy for users to get dressed without stress and option fatigue. Also, it will allow them to fully remember their closet contents and avoid unnecessary purchasing. The site will be responsive, polished, and suited to busy people. As someone who has trouble deciding what to wear everyday, this app will be a useful addition to my daily routine.

Site Pages:

- Home – A welcome page introducing the site and its pages
- My Closet – A gallery of all uploaded clothing items, sortable by type, color, etc.
- Create Outfit – Drag and drop outfit builder with options to tag the outfit
- Lookbook – view saved outfits and filter through them
- Upload Item – Upload new clothing items images and fill out the necessary information about it.

Data Storage, Manipulation, and Viewing:

1. Clothing items, each item including:
 - a. Image
 - b. Type
 - c. Color
 - d. Season
 - e. Custom Tags
 - f. ID (internal tracking)

Users can add and delete items and the closet will be stored in a JSON file or database.

2. Outfits, including
 - a. Name
 - b. Clothing items (array of IDs)
 - c. Occasion tags
 - d. Preview image

Users can build outfits visually, filter them, and add and delete.

3. Occasions, can be predefined or picked

- a. Casual
- b. Work
- c. Dinner
- d. Party
- e. Vacation
- f. Custom

This will allow filtering in the lookbook

- 4. Security
 - a. User is the only admin (no registration)
 - b. Only the admin can add/delete
 - c. Data will be persistent through storage
 - d. Form validation through JavaScript
